

## BAD DESIGN:

- Not simple
- Not attractive
- Too occupied
- Less white space
- Too complicated
- Buttons not clear

I have created a app for Rajalakshmi college to order food through this app. The students and faculty can order their meal through this app and thus this app reduces the waiting time .This app is also used to see the upcoming events that took place in rec apart from seeing the upcoming event we can also able to track the exam schedules and class room allocations. This design looks more complicated and not much attractive .The icons and the letters are not very legible so it may create a bad user experience therefore making the icons bigger and attractive and simple will make this design more user friendly.

# GOOD DESIGN :

- More simple
- Buttons are made visible
- Extra options added
- More spacious

Now i have changed the page's color and the look has been made simple .The dropdown buttons have been added and more aligned look has been given with a proper spacing.  
log in and log out information is given within the app and the Gmail of the user is mentioned in the top right corner of the app .After making the buttons legible the user experience will improve .
